

# Premium Hosting Package

Thursday, August 3, 2017

## SUMMARY

### Premium VPS Hosting

Virtual private servers built from the ground up on cloud technology. Enjoy increased power, flexibility, and control for your website. By utilizing only high-performance components, your website will always perform at optimal levels. And thanks to our implementation of KVM hypervisor, your resources are guaranteed to be available at all times.

- dual ICPU cores
- 30GB of storage
- 4GB ram
- 1TB of monthly bandwidth
- 24/7 support
- CPANEL access
- FTP/SFTP access
- unlimited SQL databases

Premium VPS Hosting plans include server management, meaning that not only are cPanel licenses and operating system security layers included as part of your VPS Hosting plan, we will also update and patch them for you:

### PROTECTING YOUR DATA WITH BACKUPS

WordPress and cPanel provide you with powerful backup options that allow you to choose both the cadence and destination of your secure, duplicate files. In addition to this, we offer free automatic daily backups as well as live-state snapshots, which take an exact replica of your VPS container, including all running processes, allowing you to revert to this working stage at any point of the development process.

#### INCREASED PERFORMANCE

Our VPS Hosting servers all utilize solid-state drives, which perform up to 20x faster than standard hard drives. We also support PHP 7, and nearly all caching plugins for faster and more streamlined WordPress performance. Your VPS container will also be a part of a high-availability server cluster, ensuring that your data is redundant and can be spun up on another server in the event of any server issues.

#### ENHANCED SECURITY MEASURES

Keep your site and users safe! All of our VPS Hosting servers are managed and include operating system and cPanel/WHM updates and patches. In addition, we have multiple SSL offerings available for encryption, PCI compliance and domain validation, as well as an advanced and configurable firewall and DDoS Attack Protection to keep your information protected.

- Any and ALL security server and site software patches and updates (includes Wordpress)
- Daily Site software backup management
- Hacking Guarantee: any breaches that might occur will be rectified within 24 hours

\$360/year
